Transitime & Swyft

**What can one now do with  
Transit Data?**

# Background

- ▶ 15+ years in real-time information
- ▶ Led engineering and GM at NextBus
- ▶ Developed key algorithms
- ▶ Transportation advocacy

The background features abstract, overlapping geometric shapes in various shades of green, ranging from light lime to dark forest green. These shapes are primarily located on the left and right sides of the frame, creating a modern, layered effect. The central area is a plain white space.

Why?

# Transit is important

# Transit is messy

The background features abstract, overlapping green geometric shapes in various shades, including light lime green, medium green, and dark forest green. These shapes are primarily located on the left and right sides of the frame, creating a modern, dynamic feel. The central area is a clean white space.

Accuracy!

*“Better three hours too  
soon than a minute too  
late”*

- WILLIAM SHAKESPEARE, THE MERRY WIVES OF WINDSOR

# Worst case scenario

Missing the bus by a few seconds

Maximizes wait time & travel time

# Transit still not good enough

- ▶ Long wait time = long travel time
- ▶ Bus bunching
- ▶ Missed trips
- ▶ Congestion

# Competition

Flywheel

UBER

As a startup we...

~~Disrupt!!!~~

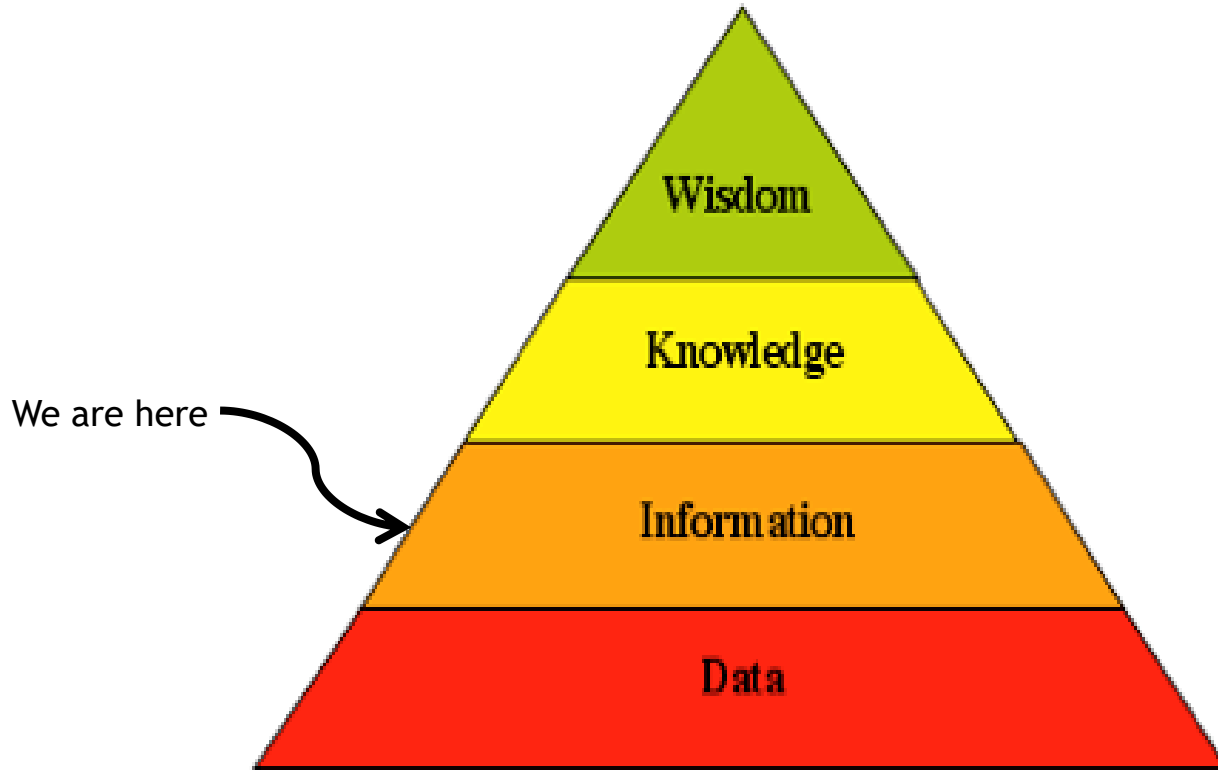

Improve!!!

# Can't manage what you don't measure

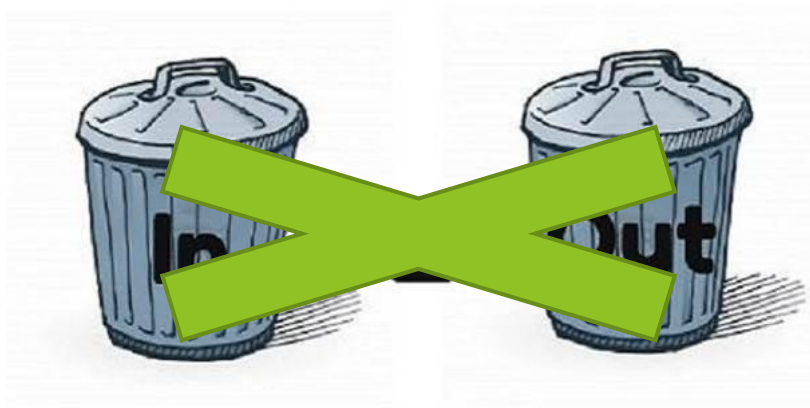

Happy passengers

# Making data useful

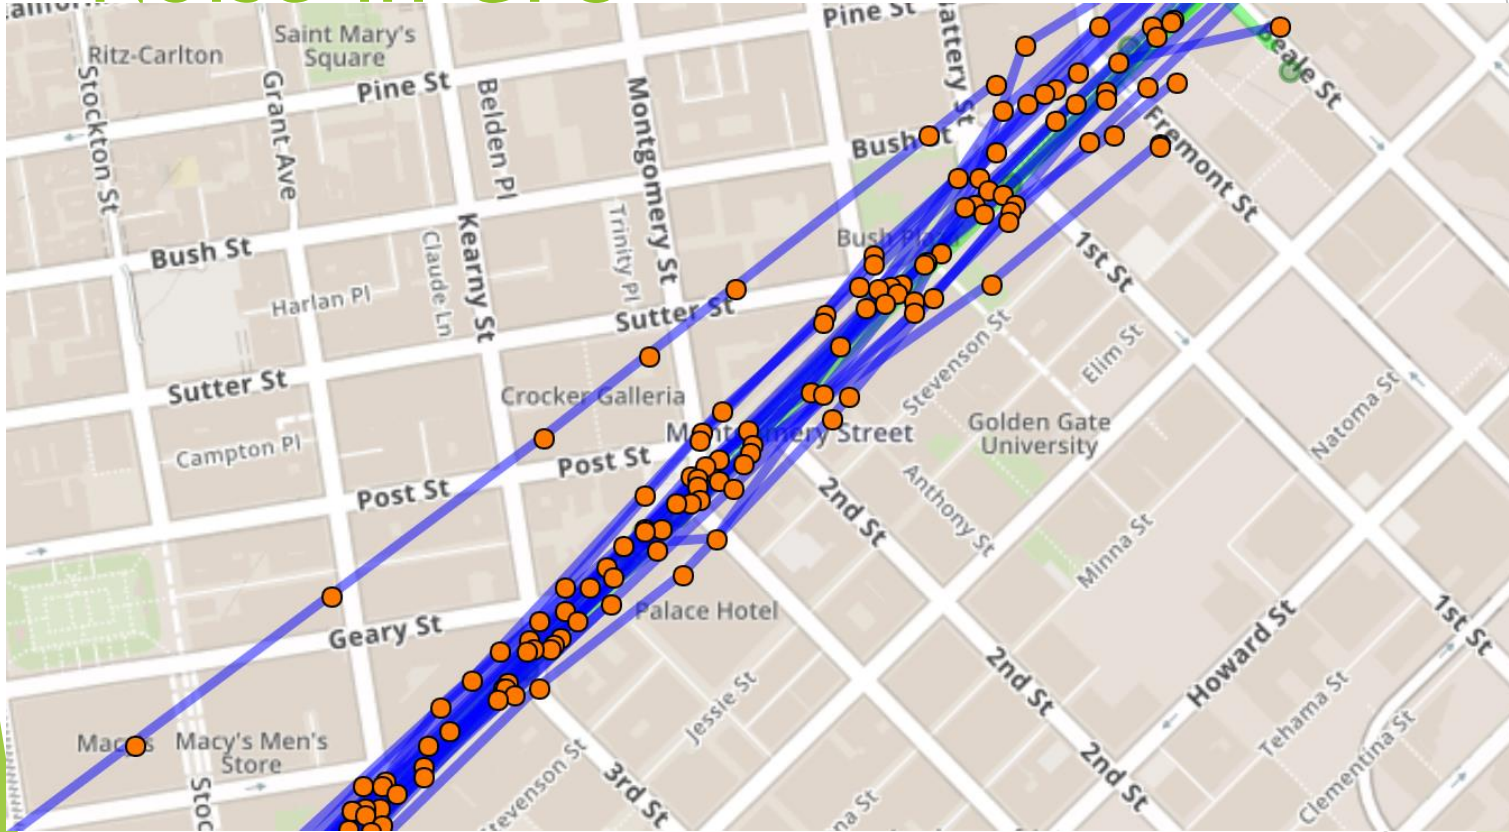

# Noise

Not acceptable  
Must work well!

# Noise in GPS

# Other data problems

- ▶ Schedule not attainable
- ▶ Stops in wrong location
- ▶ Plain old data errors
- ▶ Changes to assignments
- ▶ Drivers doing interesting things

Filtering!

# Recent improvements to passenger info

**Much better BART signage!**

**Fewer extraneous (bicycle) messages!!**

# Frequent GPS updates for SFMTA

New GPS every 20 seconds means greater accuracy!

# Transitime

GPS

Configuration data

- Commodity
- Usually already available
- Open data sources
- Can provide low-cost trackers
- 20 second reporting rate preferable
- Often noisy
- GPS data
- Routes, stops, schedules
- Open data
- Often problematic
- “Good enough” not good enough

# Transitime

GPS

Configuration data

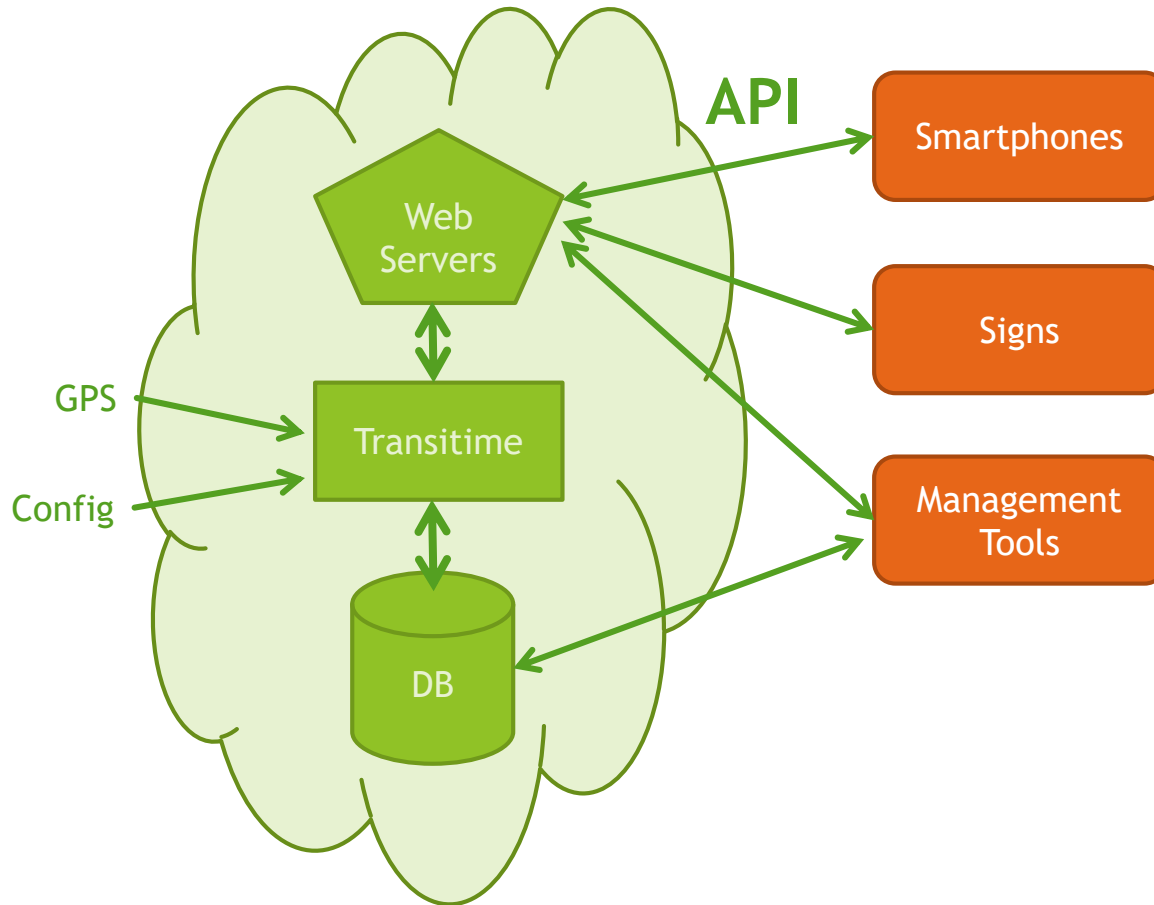

Great deal of software

Real-time information

# Transitime

# Prediction Accuracy

The background of the slide is white with abstract green geometric shapes on the right and bottom edges. These shapes consist of overlapping triangles and polygons in various shades of green, ranging from light lime to dark forest green. The shapes are positioned on the right side and bottom, creating a modern, minimalist aesthetic.

# Prediction Accuracy Improvements

- ▶ Far more data
  - ▶ Each trip considered separately
- ▶ Historic trip start times taken into account
- ▶ Tools for data visualization and testing
  - ▶ Can find problems and make improvements
- ▶ Compensates for found problems
  - ▶ e.g. GPS time from NextBus API incorrect

# Prediction Accuracy Measurements

Compares predictions to calculated arrival times

10:00am  
7 min prediction

10:06am  
1 minute early!

- ▶ Measured sample of actual arrival times to confirm
- ▶ Very large volume of data

# Schedule Adherence

- ▶ Best proxy for measuring system
  - ▶ Frequency of service
  - ▶ Bus bunching
  - ▶ Missed runs

# Schedule Adherence

- ▶ Schedule not accurate
  - ▶ aspirational, what we want buses to do
- ▶ Trips plans that use schedule are not accurate
- ▶ Transitime can output schedule based on GPS data
- ▶ Passengers will actually get to there on time

Demo!

# Immediate Next Steps

- ▶ More analytics, including travel time info
- ▶ Further improved accuracy

# Future Plans

- ▶ Holistic Transit Priority Signaling
- ▶ Even better management tools
  - ▶ BRT management
  - ▶ Ability to access raw information
- ▶ Integrate management of vehicles with real-time info
  - ▶ E.g. If bus taken out of service system adjusts both when drivers are to start trips and real-time information
- ▶ ???

# Swyft

Jonny Simkin, CEO

[www.swyftapp.com](http://www.swyftapp.com) | @swyftapp | @jonnysimkin

# TRAVEL BEHAVIOR BLACK BOX

---

# GOOD DATA CAN INFORM TRANSIT INVESTMENTS

---

- Travel origins and destinations
- Transit effectiveness
- Travel times
- System reliability
- Etc...

# TRADITIONAL DATA COLLECTION IS LIMITED

---

**Travel Surveys  
& Observation**

**Fare Data**

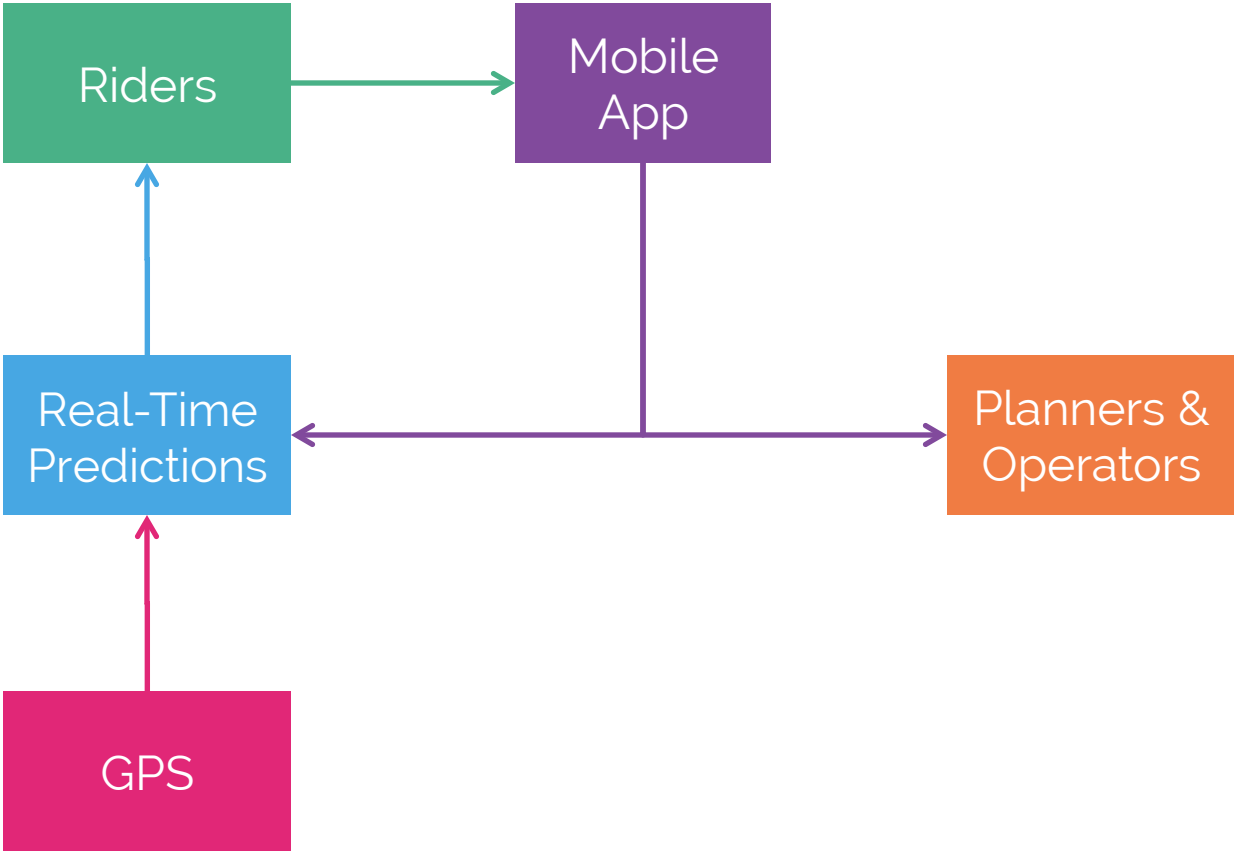

# TRADITIONAL DATA COLLECTION IS LIMITED

---

- Surveys
  - Expensive
  - Small data samples (100's to 1000's people)
  - Data is reported, not necessarily true
- Fare data
  - Subset of users
  - Usually only origin
  - Can't obtain actual origin or destination

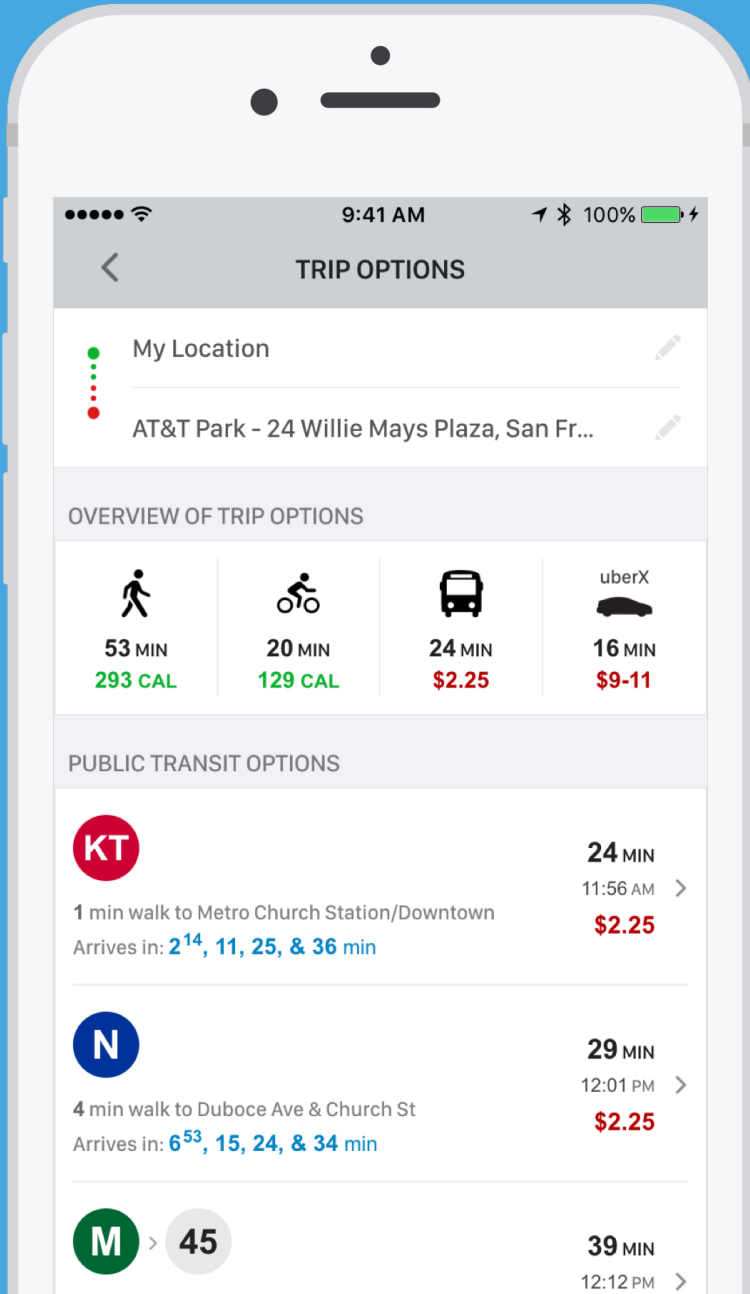

# SOLVING THE RIDER BLACK BOX

---

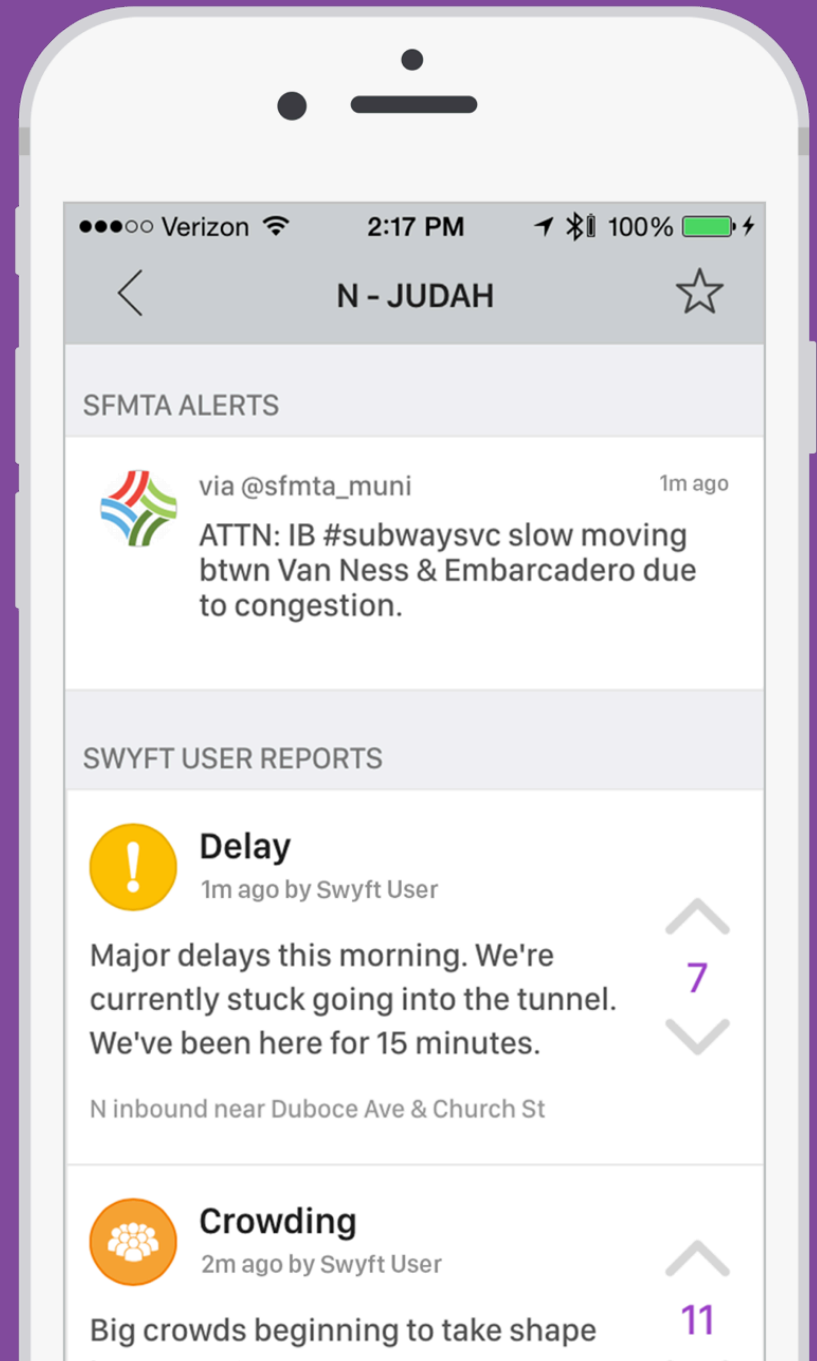

# SWYFT MOBILE APP

Find the fastest and cheapest ways to get around town.

# CROWDSOURCED REPORTS

Swyft leverages Twitter, user reports, and a big data engine to suggest the fastest ways to get around town.

# SENSORS ON SMARTPHONE

---

- Position
  - GPS
  - WIFI
  - Cellular
  - Bluetooth
- Accelerometer
- Camera
- Light sensor
- Barometer
- Gyroscope
- ...and many more

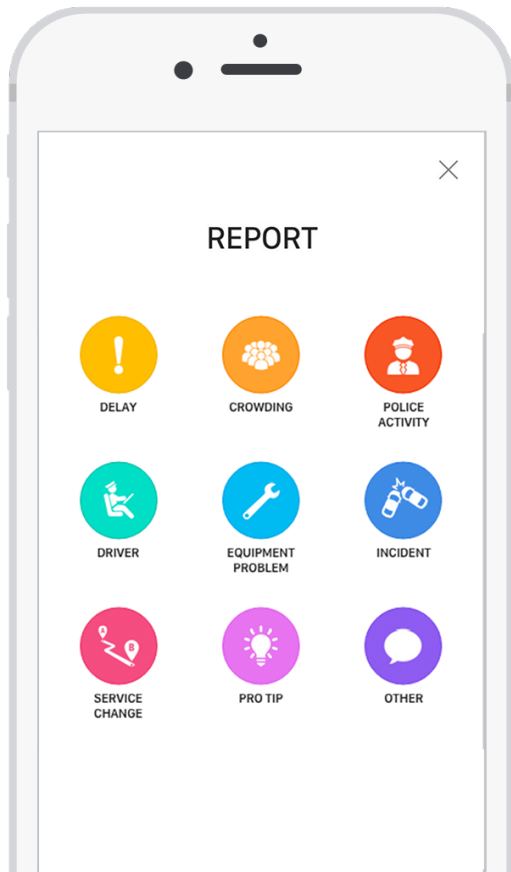

# TYPES OF DATA WE CAN COLLECT

---

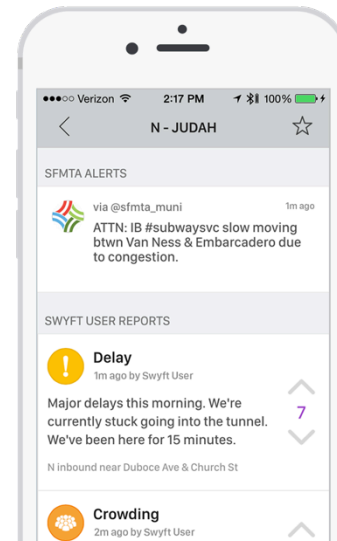

- Delays, overcrowding, etc (crowdsourcing)
- Travel behaviors
- Mode share
- ...and much more

# HOW CROWDSOURCING WORKS

User reports a problem within Swyft

Swyft can alert transit agencies of the problem

Swyft helps fellow riders avoid the issue

# RAPID COMMUNICATION PLATFORM

Swyft can detect issues before they show up on Twitter

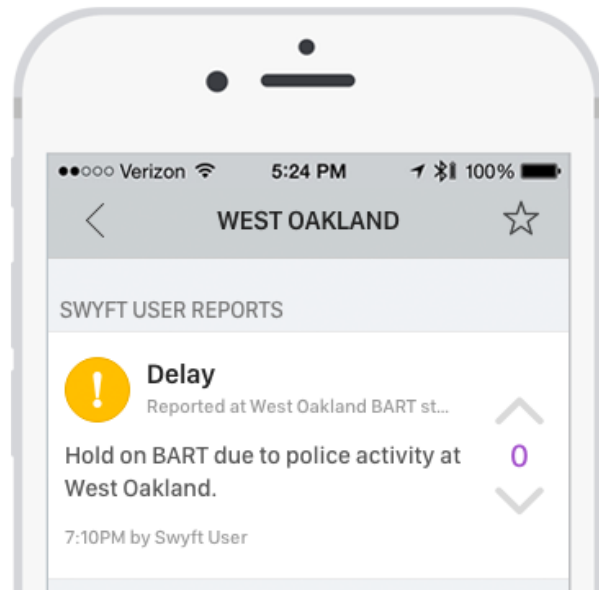

Twitter

Station closure announced at 8:10pm

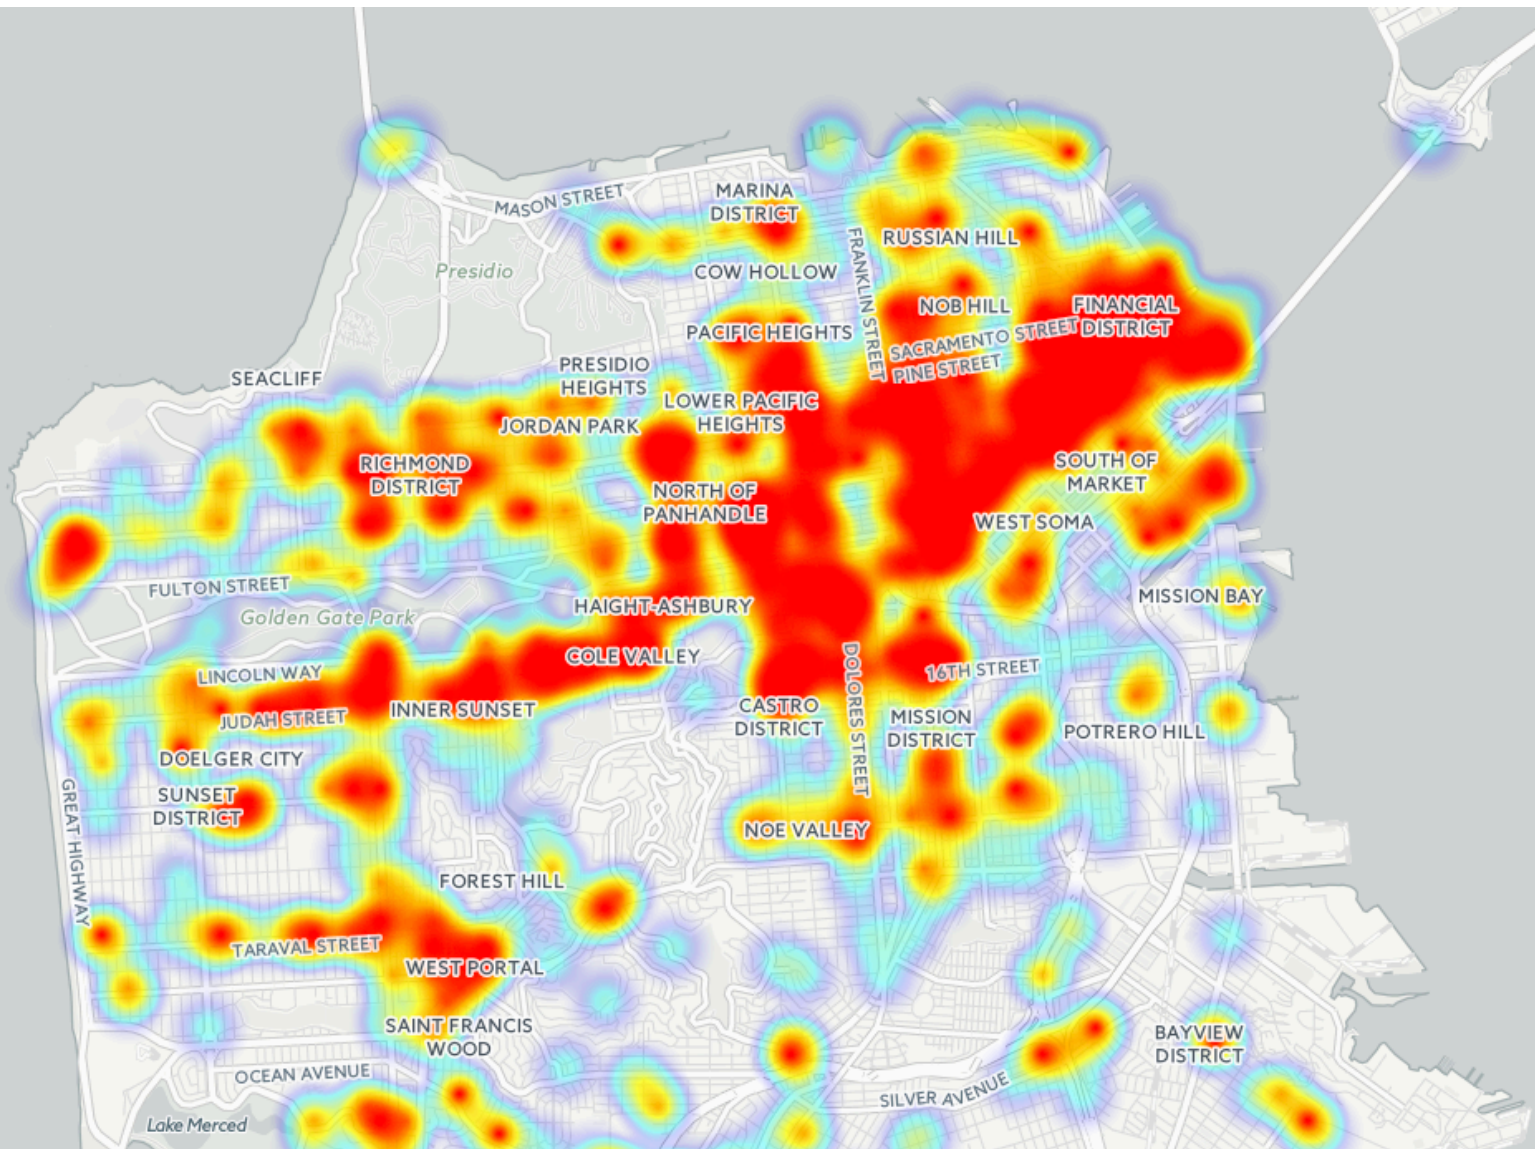

**1 HOUR DIFFERENCE**

Swyft

Station closure reported at 7:10pm

# UNDERSTAND WHERE ISSUES OCCUR

# CROWDSOURCING BENEFITS

---

- Faster incident detection and response
- Better rider communication
- Historical reporting
- Can crowdsource many things:
  - Operations: delays, equipment issues, driver performance, etc.
  - Prediction accuracy
  - Accessibility (broken elevators)
  - Real-time crowd levels

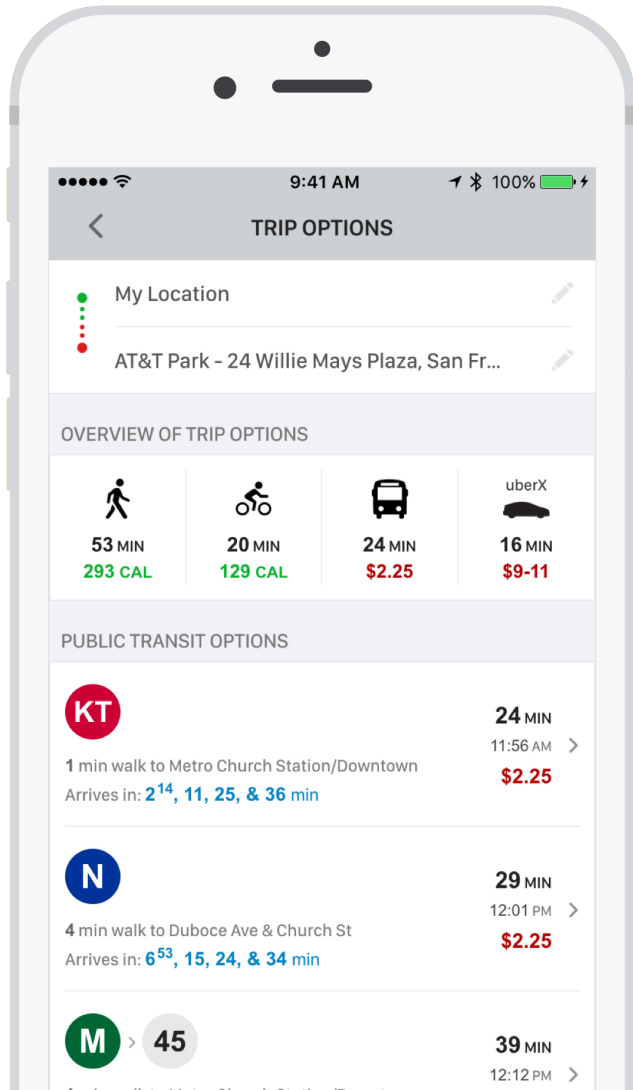

# REAL-TIME CROWDING LEVELS

Create a mesh network of devices communicating position

---

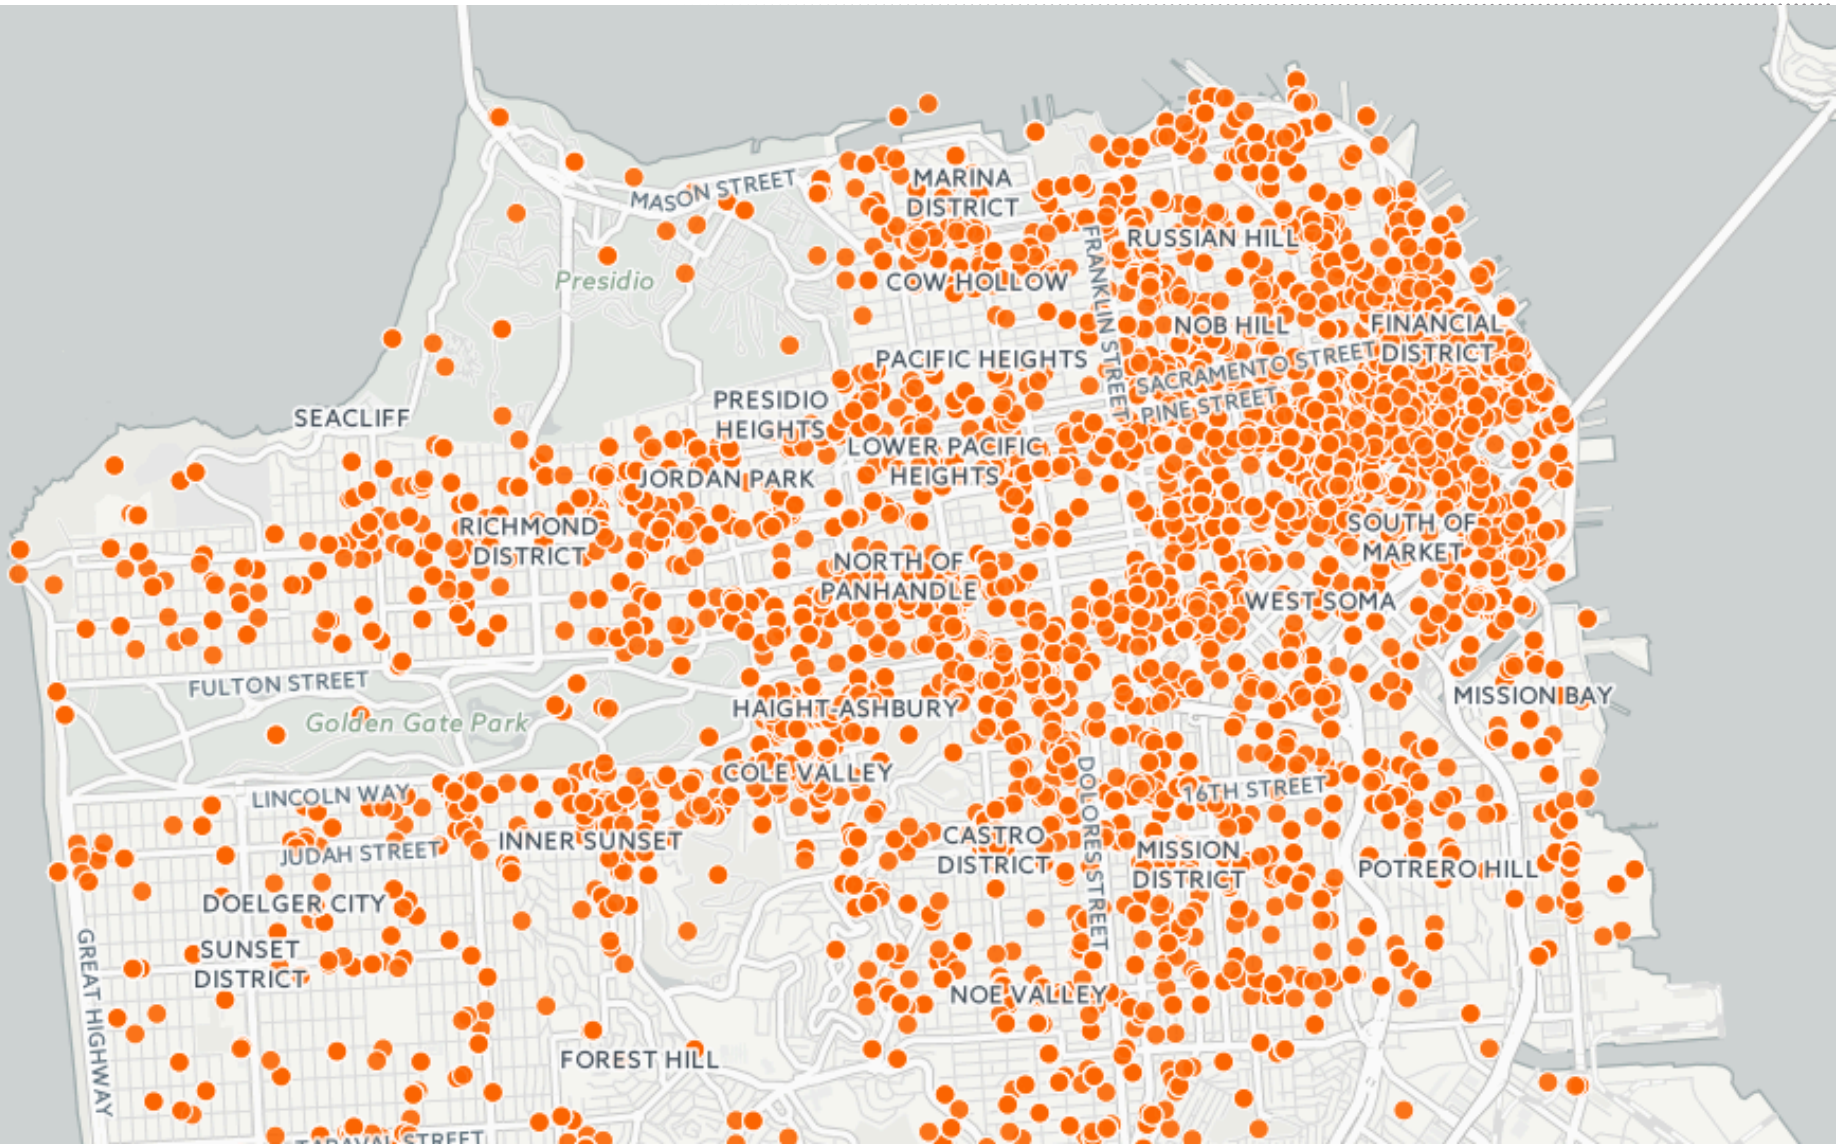

# TRAVEL BEHAVIORS

- Origin-destination pairs
- Mode choice\*
- Route choice

\* When permitted by partners

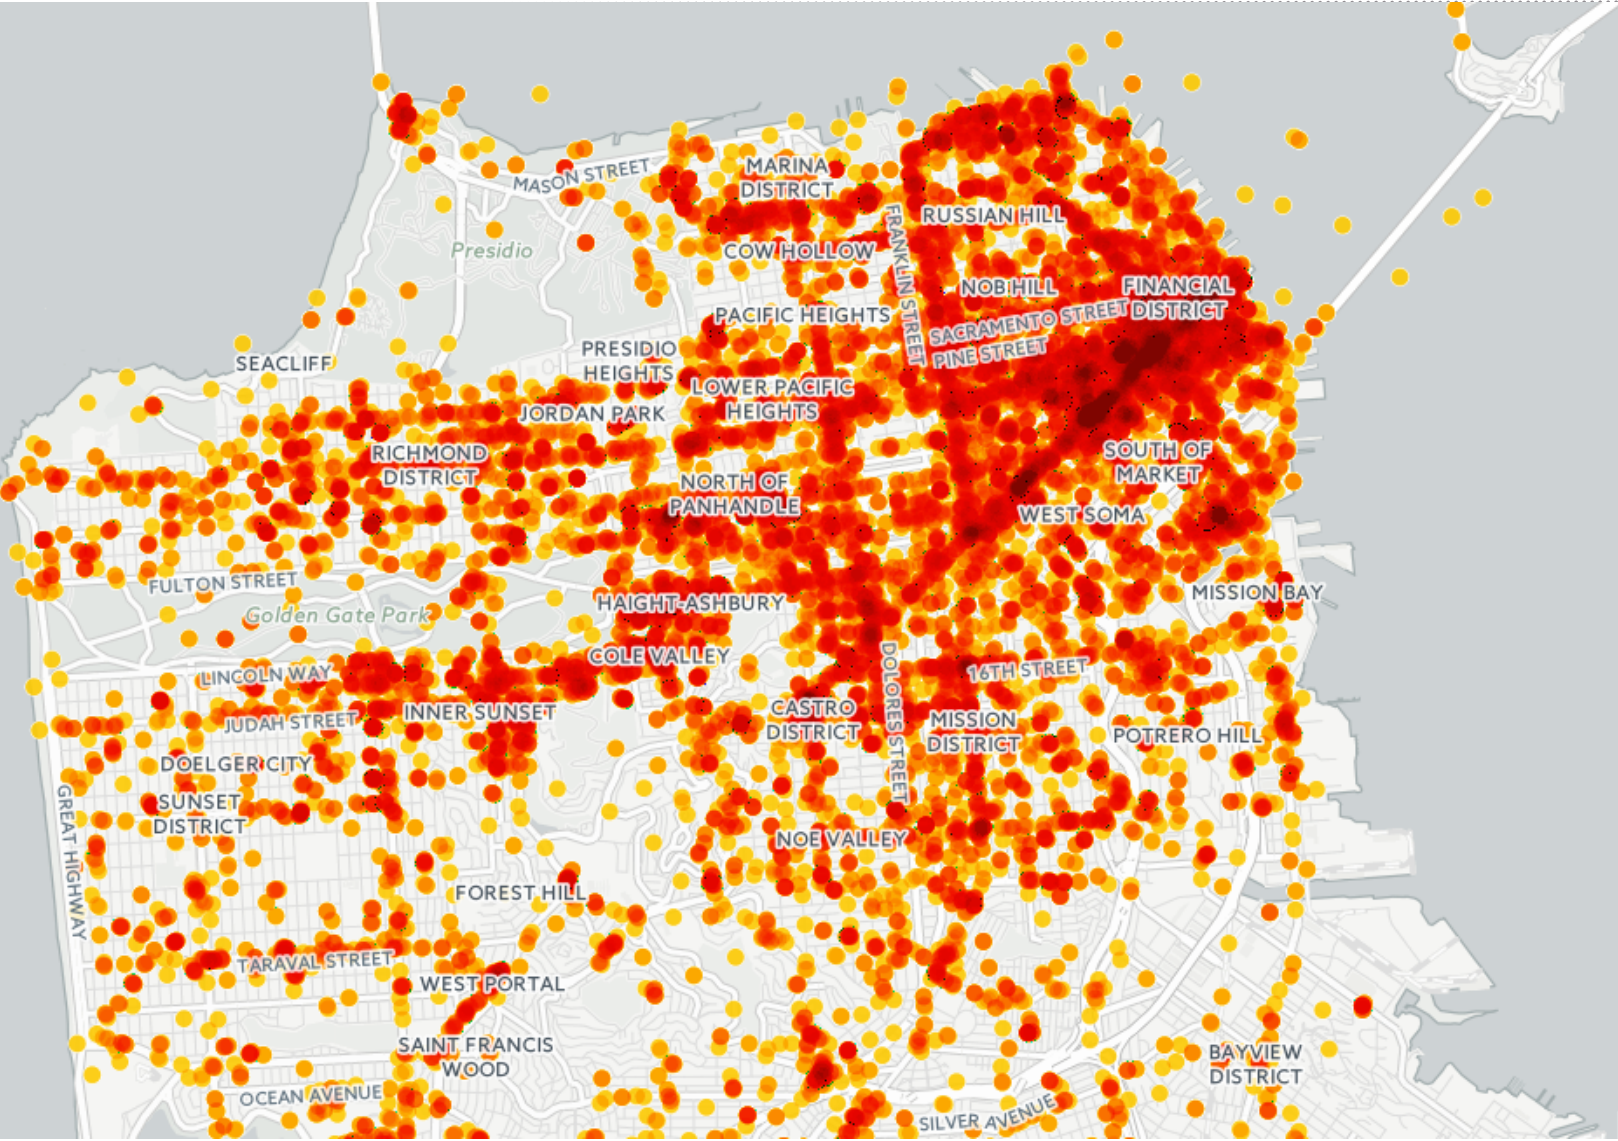

# ORIGIN-DESTINATION PAIRS

# TRANSIT USAGE

Transit usage density in San Francisco

# USER PRIVACY

---

- User permission
- Protect identity
  - No sign in
  - Shuffle anonymous user IDs every 24 hours
- Protect locations
  - Census tract level data

# THANK YOU
